

Controlling Exhaust Emissions

CORPORATE OVERVIEW

Pyroban EnviroSAFE® a Pyroban Group company has been designing & manufacturing industrial exhaust emission solutions since 1995.

Building on Pyroban's 38 years of engineering excellence, Pyroban EnviroSAFE continues to serve a wide range of industries with exhaust emission solutions, helping companies operate in a more environmentally sustainable manor.

WHY PYROBAN ENVIROSAFE?

The use of diesel and LPG engines for mining, construction and material handling creates a number of special pollution concerns. Reducing toxic gases such as carbon monoxide, hydrocarbons, nitrogen oxides and particulate matter to improve air quality for workers is one of the key principles on which Pyroban EnviroSAFE was founded.

Today with sales, service & manufacturing facilities in the UK and the Netherlands serving the international markets, Pyroban EnviroSAFE provides an advanced proven range of diesel and LPG pollution and emission control solutions, stopping exhaust emissions at the source.

EnviroSAFE continue to work closely with leading organisation bodies such as the **Environment Industry Commission (EIC)** and the **Energy Saving Trust (EST)**, promoting and implementing the benefits of reducing industry exhaust emissions.
