EXHAUST FLAME ARRESTORS™

MAXIMISE 'ZONE 2' POWERPACK PRODUCTIVITY

EVER CLEAR - FIT AND FORGET

Ever Clear Exhaust (ECE) Flame Arrestors developed by Pyroban require minimal maintenance and are a direct replacement for plate type flame arrestors.

Operators can now fit and forget* and get on with the job.

- ✓ Eliminate the cleaning operation of plate type flame arrestors
- ✓ Eliminate the Safety Risk (of using dummies)
- ✓ Be more productive – Enjoy longer operation and reduce non-productive time
- ✓ Eliminate asset down-time offshore
- ✓ Now available on Pyroban kits and HazPaks
- ✓ Up to **1000 hours before cleaning** required (dependent on diesel quality & duty cycle)
- ✓ Tested in accordance with EN1834-1:2000 and suitable for T3, IIA & IIB gas groups.
- ✗ No cleaning or changing every 8-10 hours
- ✗ No manual handling compliance issues. Plate type exhaust flame arrestors typically weigh over 25kg and are located above waist height
- ✗ No exposure to sources of ignition or risking compliance issues when wrongly using a 'dummy'. Engines with Pyroban explosion protection are only certified when an exhaust flame arrestor is fitted**.

Bolted into the exhaust system between the turbo and gas cooler, ECE flame arrestors are suitable for new, or existing, Pyroban protected turbo diesel engines (100bhp+).

Exhaust flame arrestors are part of the explosion proof system found on diesel engines used in Zone 2 hazardous areas. They allow the engine exhaust gases to pass through, but will stop a flame in the event of gas ingestion for example.

* Fit and forget is a term used to suggest that this is not a daily maintenance consideration. It should now form part of the periodic maintenance schedule.
** Except for equipment fitted with Pyroban's 3GP or EX SCS which feature gas detection.

UPGRADE YOUR ASSETS

For as little as half the annual cleaning costs of a plate type exhaust flame arrestor you can upgrade your assets with Ever Clear.
